|---|---|---|---|
| **Name** | Veni Prasanna S | **Track** | Data Analytics |
| **Phase** | Phase 2 — Dashboard and Review | **Git tag** | phase-2 (to create/push) |
| **Repository** | https://github.com/VENIPRASANNA/growmar_pulseiq | **Task focus** | Tasks 6–10 |

**Repository:** https://github.com/VENIPRASANNA/growmar_pulseiq

## 1. Executive summary

Phase 2 covers workforce dashboards, payroll reconciliation, and budget-versus-actual/KPI reporting. Task 10 compares departmental payroll budgets with actual employer costs, checks KPI targets, and identifies departments needing attention. The recorded validation run passed 35 automated tests. This supports the reported test run, but does not independently prove every official programme rubric item has been satisfied.

## 2. Phase 2 task status and evidence

| Task | Status | Evidence / proof |
|---|---|---|
| Task 6 — Attendance, overtime, leave | Implemented | task6_attendance.png; task6_overtime_leave.png; task6_completion_report.md |
| Task 7 — Attrition analytics | Dashboard evidence included | Actual exits, exit categories, tenure and aggregate risk bands |
| Task 8 — Team productivity | Dashboard evidence included | Team/sprint delivery, cycle time, on-time delivery, blocked/reopened work |
| Task 9 — Payroll cost/reconciliation | Implemented; mismatches open | Commit cec7759; docs/evidence/task9/; findings and anomaly review |
| Task 10 — Budget vs actual/KPIs | Implemented | Commit 1f256c2; budget chart/table and KPI screenshots |

Task 9 exceptions remain unresolved pending source evidence and authorised approval. Task 7/8 dashboard evidence is included; confirm exact mapping to the official rubric before submission.

## 3. Proof the dashboard works

Recorded checks: app.py syntax check passed; 35 automated tests passed; Task 9 commit cec7759 and Task 10 commit 1f256c2 are recorded as pushed. The screenshots provide visual evidence of the dashboard outputs.

## 4. Mini challenge — trace one dashboard number

Metric: September 2026 total payroll budget versus actual employer cost. Read departmental budgets from 03_Data/csv/budget_payroll_dept_month.csv; group raw.fact_payroll by month and department; sum employer_cost; join actuals to budget; calculate variance and variance percentage; aggregate the month for the headline values. Hand check: ₹55,519,622 − ₹56,161,000 = −₹641,378. Actual employer cost was ₹641,378 below budget. This checks headline arithmetic; a row-level audit should re-query source rows.

## 5. Learning, reconciliation and problems

Variance = actual payroll cost − budget; positive means over budget and negative means under budget. Reconciliation checks whether records expected to agree, such as payroll and ledger expenses, match within tolerance. Missing KPI targets remain unavailable rather than being replaced with zero. Task 9 differences remain open until investigated and approved; source records must not be changed without authorisation.

Problems/controls: missing KPI targets are shown as unavailable; departmental variances are flagged for owner review; payroll-to-ledger exceptions are documented as unresolved; official rubric mapping for Tasks 7/8 should be confirmed.

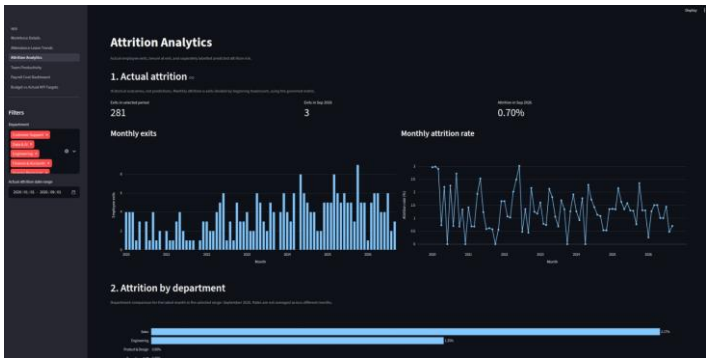

## 6. Next phase and submission checklist

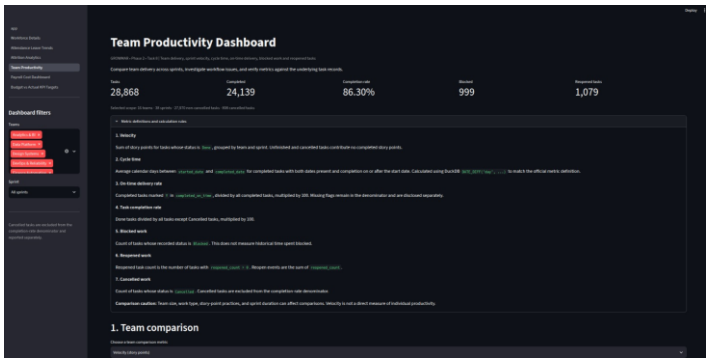

Confirm the rubric and evidence mapping for Tasks 6–10; create and push the phase-2 Git tag after confirming the intended final commit; validate KPI definitions with the owner; investigate Task 9 exceptions with data/accounting owners; export one PDF, verify the clickable GitHub link, and upload it to the programme form. Submission is not fully complete until the tag is pushed, rubric mapping is checked, and the PDF is uploaded.

## Evidence gallery

### Task 6 and 7 — Attendance and Workforce dashboard / analysis

historical exits are shown separately from model-estimated risk. Predicted risk is not a certain outcome for any individual; low-count groups are suppressed.

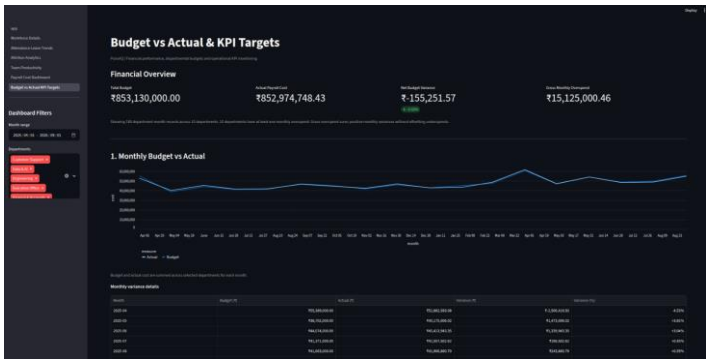

### Task 8 — Team productivity dashboard

Team/sprint-level measures are descriptive, not individual performance scores. The dashboard includes delivery, cycle time, on-time completion and work requiring attention.

### Tasks 9

Task 9: payroll-to-ledger differences remain visible for investigation. This dashboard is a reconciliation aid, not approval to alter payroll or ledger records.

## Task 10 — Budget vs actual and KPI targets

September 2026 budget: ₹56,161,000. Actual employer cost: ₹55,519,622. Variance: −₹641,378 (under budget).
